

#### SciPlay Corp (SCPL)

Viktor Lobov, Max Hopley, Sam Serio, Jamie Cheng & Vish Gopinath November 2019

### What is the Market Missing

We believe that the Market is treating SciPlay as if it was a developer of quickly fading games with high, unprofitable growth. In turn, we are looking at a strong cash generator with one of the highest conversion ratios (+2x premium to the industry) and one of the highest monthly revenue per paying customer (~\$85 for SCPL vs ~\$40 for Zynga). We also believe that sell side analysts' per game revenue numbers, which are taken from Sensor Tower, shows their relative disinterest, as deep analysis of the company filings would contradict every single one of them.

Sep. 19, 2019 9:24 AM ET | About: SciPlay Corporation (SCPL) | By: Brandy Betz, SA News Editor 🎽

- Bank of America Merrill Lynch downgrades SciPlay (NASDAQ:SCPL) from Buy to Underperform and cuts the target from \$17 to \$12.
- The firm says it lacks <u>"any significant visibility</u>" into SCPL's pipeline with a lack of new game catalysts.

### Industry Overview

The Company operates in a niche and highly competitive market of social casino gaming developers which have begun to diversify their games to other social gaming categories, including puzzles.

#### Global Social Casino Gaming Market to reach ~\$6.5B by 2022

#### Web + Mobile Revenue (in Millions)

#### Secular Tailwinds

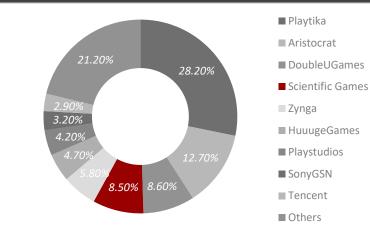

"The social gaming market is growing at a rapid pace on account of the increasing adoption of advanced gaming technologies, rising income levels, low cost of games, increase in online content, and digital distribution, which allow users to download the content on their systems. Popular social gaming genres, such as social casino is likely to drive the market growth during the forecast period due to the increasing social gaming traffic."

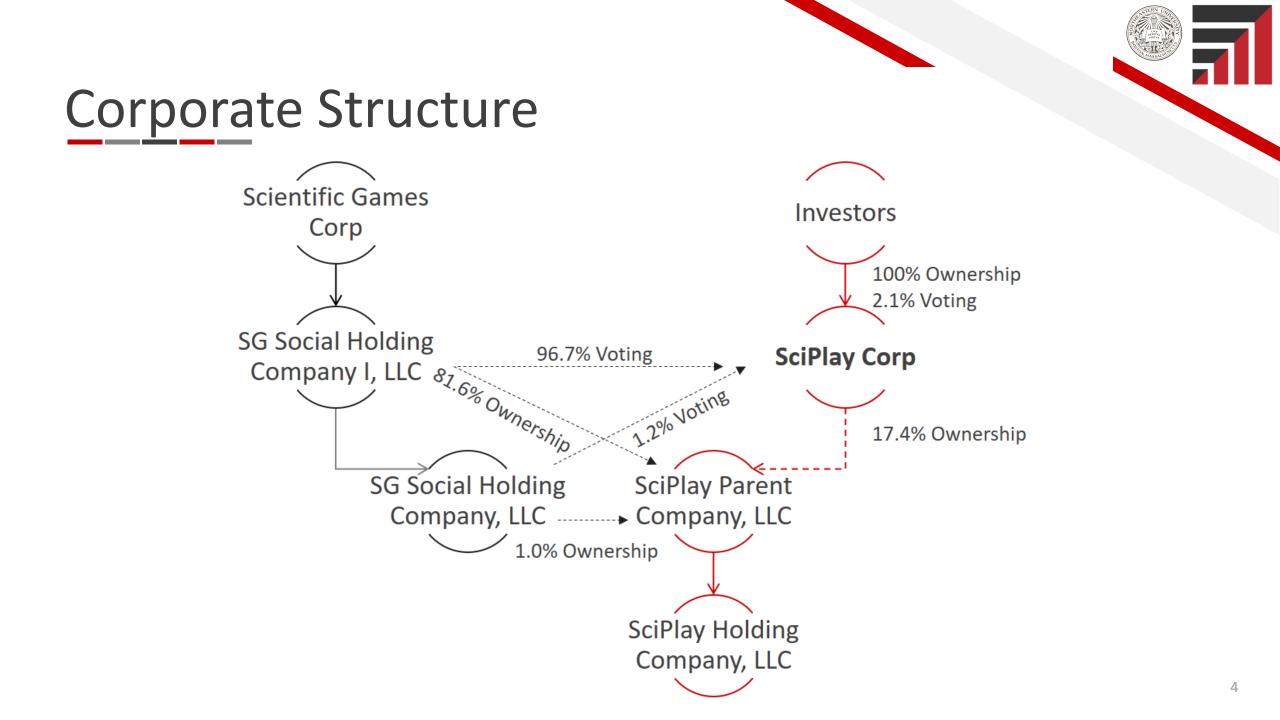

- Global Market Insight, August, 2019

ARISTOCRAT Delaytika SciPlay

### **Company Overview**

"SciPlay is leading developer and publisher of digital games on mobile web platforms, providing entertaining free-toplay games that millions people play every day for authenticity, engagementand fun."

CEO

SciPlay generates all its revenues from the sale of virtual coins, chips and bingo cards (virtual currency), which players can use to play casino-style slot games, table games and bingo games. The games are distributed through web (~16% as of 3Q 2019) and mobile (~84% as of 3Q 2019) platforms such as Facebook, Apple, Google, Amazon, and others. The company offers third-party branded games and original content.

#### Core Games

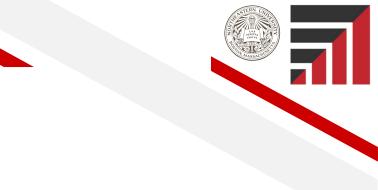

#### Investment Thesis #1

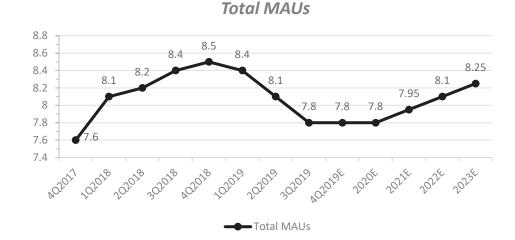

#### The market "can't see the forest for the trees".

- The market seems disinterested in SCPL unless they increase visibility into their future games
- We argue that this approach is causing the market to miss SCPL's current portfolio: an evergreen collection of 7 games with sustained growth since 2012 and a superior cost structure to the rest of the industry
- Superior cost structure due to:
  - Perpetual, exclusive, royalty-free license to SGMS's IP, reducing COGS and R&D expense
  - Games have longer lifetime, requiring lower R&D and marketing spend
  - Disciplined, data-driven approach to marketing, incremental content for existing games and developing/acquiring additional games
- Our valuation gives SCPL ~8.5% FCF Yield in 2020 just for their current portfolio alone

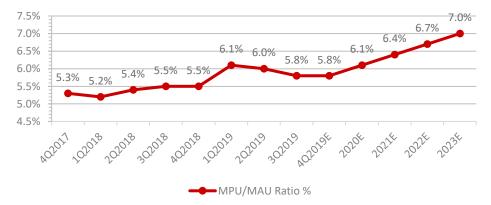

#### Investment Thesis #2

#### Active User Monetization Growth Runway

- Companies like SciPlay have never been and will never be reliant on new games production.
- The primary objective of this business model is to grow **MAU** to **MPU** conversion.
- Slotomania *by Playtika* is converting at 8.6% and we assume Jackpot Casino should be the same.
- Management targets Jackpot-level conversion and we are discounting it by ~1.5% to 7.0% by 2023.

#### Investment Thesis #3

# Any additional avenues of growth beyond their current portfolio are priced at \$0

- Less than 10% of SciPlay's revenues are generated internationally
  - Zynga's international exposure is ~30%, Playtika ~30%
  - Scientific Games "owns" ~30% of UK land-based slot machines facilitating growth runway
- SciPlay's plans for growth within casual gaming market is targetting a large user base
  - TAM of ~\$30B vs ~\$5B for social casino gaming
  - The markets are similar enough to transfer the development and user acquisition skills
- Strategic acquisitions to develop new titles from key brands

### Thesis Risk: Legal Issues

Washington state's supreme court has ruled against social casinos under its archaic gambling laws and while other states are unlikely to follow, microtransaction and "loot box" regulation poses a threat to the industry going forward

#### Current Issue: Washington State Supreme Court Ruling

<u>The ruling</u>: virtual currencies in social casinos extend players the "privilege of playing the game," so when a user runs out of currency they must buy more with real money, constituting illegal online gambling (under Washington law)

Other legal concerns: if in-game currency can be resold on some secondary market then this also should constitute illegal online gambling

**Implication:** minimal. Washington state's online gambling laws are very different from most other states

#### Future Issue: Microtransaction and Loot Box Regulation

**The issue:** movement in US and Europe to ban "Loot Boxes" and microtransactions targeting kids

**Current Proposal:** not realistic (ban on microtransactions or loot boxes of any kind that any minor could potentially buy)

Likely Future Laws: ban on loot boxes, potential ban on some types of microtransactions catering to kids

Implication for SCPL: minimal. Given they do not target anyone under age 21 and do not use loot boxes, SCPL appears safe

### Thesis Risk: Loss of IP License

Could potentially lose access to Scientific Games IP in an acquisition or similar scenario. Highly unlikely but warrants monitoring in the future due to the existential risk it would present.

**Dependence on IP:** if SCPL was banned from using any Scientific Games IP they would have to rework their entire game portfolio to eliminate the Scientific Games IP they rely on. This transition would greatly increase costs and likely lose loyal players.

<u>Worst-Case Scenario</u>: if Scientific Games cease to hold 50% of voting shares of SCPL, there's a possibility that all of SCPL's IP licenses on Scientific Games IP would be voided.

Interpretation: the ability to void all IP licenses with loss of control of the company under certain circumstances appears to be a legal poison pill and a deterrent for potential acquirers. No deal where the IP would be revoked could foreseeably make rational sense for both parties.

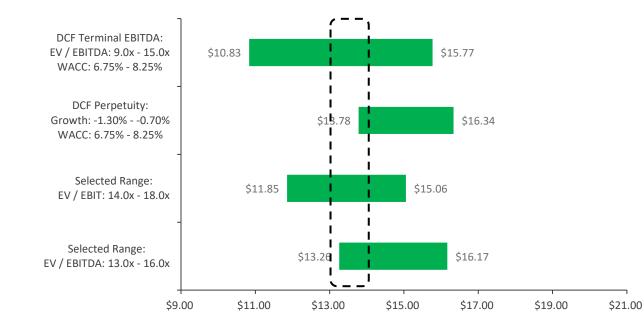

The IP License Agreement has a change of control provision that requires Bally Gaming's consent, not to be unreasonably withheld, in the event of changes of control of our company that are not initiated by Scientific Games. Bally Gaming could reasonably withhold its consent, and therefore have the right to terminate the IP License Agreement, if, for example, a competitor of Scientific Games were to acquire more than 50% of the voting power in our company. If Bally Gaming were to exercise this termination right, we would lose the benefit of any intellectual property licensed to us under the IP License Agreement, which is essential to our business, including any intellectual property that we develop, to the extent it is an improvement, enhancement, modification, or derivative work of any intellectual property licensed to us under the IP License Agreement. Any transaction that results in Scientific Games ceasing to hold at least 50% of the voting power in our company will be considered a change of control transaction requiring Bally Gaming's consent, except for: (i) transactions initiated by Scientific Games, or (ii) decreases in voting power resulting from (a) Scientific Games selling any ownership interests in our company, either privately or through additional public offerings, or (b) any future issuance of additional shares of our capital stock. In addition, our rights to any third-party intellectual property licensed to us under the IP License Agreement are subject to any change of control provisions in the applicable third-party license.

- Prospectus: "Certain Relationships and Related Party Transactions—The Transactions—SciPlay Parent LLC Agreement."

#### Valuation

#### Target Range of \$13.00-14.00, representing an upside of ~28%-38%

#### Summary

#### We use our fund's investment philosophy and checklist to analyze SCPL under the lenses of our investment process and investment categories at SVF.

The Team understands the Company's business model, the industry it operates in, its portfolio of games and possible future avenues of growth.

The stock remains cheap on a standalone as well as relative basis , with low forward-looking EV/EBITDA and strong FCFF growth, no debt on the B/S, and predictable revenue streams. By considering only the present game portfolio, our analysis implies a significant *margin of safety,* with qualified upside. (*Above Viktor's personal rate of return.\*\*\**)

As of 3Q2019, coverage dropped significantly with **4** analysts—*including Deutsche, RBC, GS and Craig-Hallum*— still covering the stock.

The Team has evaluated regulatory concerns surrounding the online gambling/casino market and determined that due to SCPL's user profiles and zero economic value of the virtual currency used in its games, the Company has a limited risk profile.

The Team believes that the Company ultimately operates in a growing industry with sound operations; a high margin cost structure; a mediated risk profile; strong management team with experience producing, growing and maintaining highly monetizable games; and warrants a higher valuation.

### **Investment Criterion** Understand Cheap Overlooked Safe Good
